What Law Firms Should Expect To Pay For I.T. Support

How To Sort Through The Confusion And Complexity Of I.T. Services Companies’ Contracts, Services And Pricing To Avoid Hiring The Wrong One

The Law Firm Owner’s Guide To I.T. Support Services And Fees

From the Desk of
David Bennett
President | Connections for Business

Dear Colleague,

One of the most common questions we get from managing partners, firm administrators and practice managers is: **“What should our firm expect to pay for I.T. support?”** Since this is such a common and important question, I decided to write this report. There are 3 reasons why choosing your I.T. company based on fees alone, or even making price one of the top deciding factors, can lead to overpaying, frustration, lost billable time and unnecessary risk to your firm.

They are:

1

No two I.T. service agreements are the same, even when the services sound similar. One provider may include secure remote access, Microsoft 365 protection, endpoint security, backup monitoring, practice management support and vendor liaison services, while another may charge extra for many of those same items. Looking only at monthly price can make a weaker agreement appear less expensive than it really is.

2

Law firms have a higher duty to protect confidential information than many other businesses. Your systems may contain privileged communications, client records, pleadings, settlement documents, discovery, financial information, trust-related records and sensitive personal data. If your I.T. provider is not proactively protecting your data in systems such as **Clio, NetDocuments, iManage, MyCase, PracticePanther, Microsoft 365** and other line-of-business applications, your firm could be exposed without realizing it.

3

Downtime costs law firms money and credibility. When attorneys, paralegals and staff cannot access email, documents, case files, calendars, phones or remote systems, billable work stops. Deadlines do not move because your server is down or your cloud application is unavailable. The right I.T. partner should help your firm minimize downtime, maintain business continuity and keep your team working securely from anywhere.

In the end, my purpose is to help you make the most informed decision possible so your firm ends up working with someone who helps you protect client confidentiality, keep billable work moving and accomplish what you want in a time frame, manner and budget that is right for you.

Dedicated to serving you,
David Bennett, President | Connections for Business

About The Author

David Bennett is the President of Connections for Business and a seasoned IT veteran with over 45 years of hands-on experience in helping companies navigate the ever-evolving world of technology. Throughout his career, David has led IT transformations for over 2,000 businesses across 100+ industries—from nimble startups to major enterprises like Florida Power & Light, The Golf Channel, and ADT. His practical approach, paired with deep technical know-how, has made him a trusted advisor to business owners who don't want just an "IT guy," but a strategic partner who gets results.

As the founder and leader of South Florida's most awarded Managed Service Provider, David built Connections for Business around **One Core Promise: Take care of clients like family and deliver IT support they never have to think twice about.** For over 15 consecutive years, the firm has earned accolades for its outstanding client service, operational excellence, and unwavering reliability. Under David's leadership, Connections has become synonymous with "IT done right," **offering proactive support, world-class cybersecurity, and technology leadership that empowers growth-minded businesses.**

David's no-nonsense style, long-standing reputation, and deep roots in the South Florida business community set him apart from the sea of MSPs who overpromise and underdeliver. He's not here to dazzle with jargon—he's here to help you sleep better at night knowing your business is secure, productive, and future-proof. Whether you're facing growing pains, security concerns, or just fed up with unreliable IT, David and his team are ready to step in and take IT completely off your plate—so you can focus on running your business.

Comparing Apples to Apples:

The Predominant I.T. Services Models Explained

Before you can accurately compare the fees, services and deliverables of one I.T. company to another, you need to understand the 3 predominant pricing and service models most of these companies offer. Some I.T. companies offer a blend of all 3, while others are strict about offering only one service plan.

The 3 predominant service models are:

Time and Materials (Hourly).

Your firm pays an hourly rate, often \$150-\$250 per hour, when something breaks or when a specific project needs attention.

Pros: You only pay when you need help, and you are not locked into a monthly managed services agreement.

Cons: Costs can become unpredictable, urgent issues can get expensive fast, and the I.T. company has less incentive to prevent problems before they interrupt your attorneys and staff.

Similar to this are Value Added Reseller services. VARs typically do I.T. projects for Law firms that have internal I.T. departments. The term "value added" reseller is based on the fact that they resell hardware (PCs, firewalls, servers, etc.) and software, along with the "value added" services of installation, setup and configuration. VARs typically service larger firms with internal I.T. departments. A trend that has been gaining ground over the last decade is that fewer VARs exist, as many have moved to the managed I.T. services model.

Comparing Apples to Apples:

The Predominant I.T. Services Models Explained

Managed I.T. Services (MSP, or “Managed Services Provider”).

This is a model where the I.T. services company, called an MSP, takes on the role of your fully out-sourced I.T. “infrastructure.” **That includes things such as:**

- A managed services provider acts as your outsourced I.T. department and takes responsibility for supporting your firm’s technology environment.
- This typically includes troubleshooting, device setup, cybersecurity, backup monitoring, help desk support, secure remote access, vendor coordination, system monitoring, business continuity planning and support for tools such as Microsoft 365, Clio, NetDocuments, iManage, MyCase and PracticePanther.
- Managed services are typically priced per user, often in the \$146-\$250 per user per month range, depending on what is included and how much responsibility the provider takes on.

In addition to managing your I.T., a good MSP will provide you with an I.T. Roadmap and budget for necessary projects to further secure your network and improve the stability and availability of critical applications, as well as ensure that your I.T. systems are compliant with various data protection laws (HIPAA, FTC Safeguards, PCI, etc.) and that your cyber protections meet the standards on any cyber insurance plan that you have.

These projects are not included in the routine, day-to-day maintenance and are typically planned out in advance, based on the growth of your organization, your risk tolerance, operations, unique business model, etc.

Vendor-Supplied I.T. Services.

Some legal software vendors offer limited support for their own application. That support can be helpful, but it is not a substitute for full I.T. management. A software vendor may help with its own platform, but it usually will not protect your entire network, manage your backups, secure your endpoints, support your phones, resolve printer issues or own problems that involve multiple systems.

Let’s dive into the pros and cons of these two options

As a small or midsize law firm looking to outsource your I.T. support, you are most likely to end up having to choose between two service models: the managed services and “break-fix” models. Therefore, let’s dive into the pros and cons of these two options, and then the typical fee structure for both.

Managed I.T. Services Vs. Break-Fix:
**Which Is Better, More
Cost-Effective Option?**

The advantage of break-fix services is that you only pay for I.T. support when you need it, without being locked into a monthly or multi-year contract. If you're not happy with the service you're getting, you can change providers easily. If you're a micro-business with only a few employees, very simple I.T. needs where you don't experience a lot of problems and don't host or handle sensitive data (medical records, credit cards, Social Security numbers, etc.), break-fix might be the most cost-effective option for you.

However, the downsides of break-fix services are many if you're NOT a small law firm and are attempting to grow in revenue, staff and clients, or if you handle sensitive, "protected" data. **The 6 big downsides are as follows:**

✗ 1. Break-fix can be very expensive

Break-fix can be very expensive when you have multiple issues or a major problem (like a ransomware attack). Because you're not a managed client, the I.T. company resolving your problem will likely take longer to troubleshoot and fix the issue than if they were regularly maintaining your network and therefore familiar with your environment AND had systems in place to recover files or prevent problems from escalating.

✗ 2. Paying hourly works entirely in your I.T. company's favor, not yours

Paying hourly works entirely in your I.T. company's favor, not yours. Under this model, the I.T. consultant can take the liberty of assigning a junior (lower-paid) technician to work on your problem who may take two to three times as long to resolve an issue that a more senior (and more expensive) technician may have resolved in a fraction of the time because there's no incentive to fix your problems fast. In fact, they're incentivized to drag it out as long as possible, given that they're being paid by the hour.

✗ 3. You are more likely to have major issues.

You are more likely to have major issues. One of the main reasons businesses choose a managed services provider is to PREVENT major issues from happening. As Benjamin Franklin famously said, "An ounce of prevention is worth a pound of cure." The smart way to avoid disasters and minimize the cost and damage is to prevent them from happening in the first place, not "hope" they won't happen.

✗ 4. You can't budget for I.T. services.

You can't budget for I.T. services and, as already explained, could end up paying more in the long run if you have to constantly call for urgent "emergency" support.

✗ 5. You won't be a priority for the I.T. company.

You won't be a priority for the I.T. company. All I.T. firms prioritize their contract managed clients over break-fix clients. That means you get called back last and fit in when they have availability, so you could be down for days or weeks before they can address your problem. Further, because you're not under a contract, the I.T. company has no incentive to keep you happy or even address the root causes of your problems, which can lead to MORE problems and MORE costs.

✗ 6. If no one is actively maintaining the security of your network and data, your chances of getting hacked go up exponentially.

If no one is actively maintaining the security of your network and data, your chances of getting hacked go up exponentially. Believe me when I tell you most people grossly underestimate the costs and damage done by a ransomware attack. Your operations shut down and your client contracts, private e-mails, company financials, employee payroll and other sensitive data are in the hands of criminals who won't think twice about e-mailing your list of employees' and clients' confidential information.

Thinking you're fine because "nobody wants to hack us" or "we're 100% in the cloud" is gross ignorance. If you don't have a professional I.T. company monitor and maintain your company's I.T. security, you WILL get hacked, incurring significant financial losses, not to mention reputational damage and client losses.

*For all these reasons, **hiring an MSP to manage your I.T. environment for an agreed-upon monthly budget** is, by far, the most cost-effective, smartest option for most businesses with 10 or more employees, or who handle critical operations and sensitive data and are risk-averse.*

What Should I.T. Services Cost?

Important!

Please note that the following price quotes are industry averages based on a recent I.T. industry survey conducted by a well-known and trusted independent consulting firm, Service Leadership, that collects, analyzes and reports on the financial Metrics of I.T. services companies from around the country.

We are providing this information to give you a general idea of what most MSPs and I.T. services charge and to help you understand the VAST DIFFERENCES in service contracts that you must be aware of before signing on the dotted line. Please understand that this does NOT reflect our pricing model or approach for your unique situation. We are simply providing this as an educational resource to help you understand the vast differences in price and value.

Break-Fix: \$150-\$250/hr.

Most I.T. companies selling break-fix services charge between \$150 and \$250 per hour with a one-hour minimum. In some cases, they will give you a discount on their hourly rates if you purchase and pay for a block of hours in advance.

Project Fees

If you are getting an I.T. services company to quote you for a onetime project, the fees range widely based on the scope of work outlined and the complexity of the project. If you are hiring an I.T. consulting company for a project, I suggest you demand the following:

A detailed scope of work that specifies what “success” is. Make sure you document what your expectations are in performance, workflow, costs, security, access, etc. The more detailed you can be, the better. Clarifying your expectations up front will go a long way toward avoiding miscommunications and additional fees later on to give you what you REALLY wanted.

Project Fees

A fixed budget and time frame for completion. Agreeing to this up front aligns both your agenda and the consultant’s. Be very wary of hourly estimates that allow the I.T. consulting company to bill you for “unforeseen” circumstances. The bottom line is this: it is your I.T. consulting firm’s responsibility to be able to accurately assess your situation and quote a project based on their experience. You should not have to pick up the tab for a consultant underestimating a job or for their inefficiencies. A true professional knows how to take into consideration those contingencies and bill accordingly.

Managed Services:

\$146-\$249 per user per month on average, depending on scope, security stack, backup requirements, number of locations and support expectations.

Obviously, as with all services, you get what you pay for. **“Operationally mature” MSPs typically charge more because they are far more disciplined and capable of delivering cybersecurity and compliance services than smaller, cheaper-priced MSPs.**

They also include CIO (chief information officer) services and dedicated account management, have better financial controls (so they aren’t running so lean that they are in danger of closing their doors) and can afford to hire and keep knowledgeable, qualified techs vs. junior engineers or cheap, outsourced labor.

Project fees:

Vary widely. For law firm projects, demand a detailed scope, fixed budget and clear timeline, especially for migrations, office moves, Microsoft 365 projects, document management changes, phone system upgrades and security improvements.

To be clear...

I’m not suggesting you have to pay top dollar to get competent I.T. services, nor does paying “a lot of money” guarantee you’ll get accurate advice and responsive, customer-centric services. But if an MSP is charging on the low end of \$146.08 per employee or less, you have to question what they are NOT providing or NOT including to make their services so cheap. Often they are simply not providing the quality of service you would expect.

5 Ways “Cheaper-Priced” I.T. Companies Hide The TRUE Cost Of Their Services In Their Contracts

As we said previously, no two I.T. services agreements are alike, and unless you are technically savvy (and most C-level executives aren't, obviously), you won't really know if what you're being quoted is insufficient, overpriced or even underquoted.

If you're not careful, the “cheapest” or less expensive I.T. provider can end up costing you a lot more due to carve-outs and hidden fees in their contracts that they will later nickel-and-dime you, or quoting inadequate solutions that you'll later need to pay to upgrade.

Here are the 5 most common things

“cheaper” I.T. companies leave out of their proposal to make themselves appear cheaper – but those companies are NOT the bargain you might think they are.

1 Inadequate cybersecurity protections for confidential client data.

A ransomware attack is a significant and devastating event for any business; therefore, you must make sure the I.T. company you're talking to isn't just putting a basic (cheap) antivirus software on your network and calling it done. This is by far the one critical area most “cheaper” MSPs leave out.

Antivirus is good but woefully insufficient to protect you. In fact, insurance companies are now requiring advanced cyberprotections such as employee cyber awareness training, 2FA (2-factor authentication) and what's called “advanced endpoint protection” just to get insurance coverage for cyber liability and crime insurance. We provide those standard in our offering, so not only do you greatly reduce your chances of a cyber-attack, but you also avoid being denied an important insurance claim (or denied coverage, period).

2 Weak backup and disaster recovery solutions that do not support true business continuity.

Make sure your I.T. company includes daily backups of your servers, as well as CLOUD APPLICATIONS such as Microsoft 365, Google Workspace and other line-of-business applications, such as your CRM data, client data, etc. That's because online applications do NOT guarantee to back up your data (read the small print in your contract and you'll be shocked). Further, your backups must be immutable, which means they cannot be corrupted by a hacker. Many insurance companies now require immutable backups to be in place before they insure against a ransomware or similar cyber event that erases data. Be sure to ask your I.T. company if that's what they quoted you.

3 Extra fees for on-site visits, after-hours support, emergency work and remote access issues.

This is another area that takes many law firms by surprise: all after-hours and on-site visits might involve an extra fee. We include ALL of this in our agreements so you aren't nickel-and-dimed for every request, but you need to make sure you understand what is and isn't included in the service agreement you're signing.

4 No vendor liaison or support for legal technology platforms, internet providers, phone systems, printers, scanners and other systems your team depends on.

Some Some I.T. companies will charge you hourly to resolve issues with your phone system, ISP, security cameras, printers and other devices they didn't sell you but that still reside on the network (and give you technical problems). As a client of ours, you get all of that INCLUDED, without extra charges.

5 Cheap, inexperienced technicians and no dedicated account management for I.T. planning, budgeting, risk review and technology strategy.

Many of the smaller MSPs will hire techs under a 1099 agreement or find cheaper, less experienced engineers to work on your network and systems. Obviously, the more experienced and knowledgeable a tech is on networking and, more specifically, cybersecurity, the more expensive they are. Make sure the company you are outsourcing to has the Microsoft or Google certifications needed to support you, as well as a written operations process on how they manage things like backups, security, etc. You can (and should!) ask them for a copy

Further, smaller MSPs can't afford dedicated account managers (IT Directors), which means you're depending on the owner of the company (who's EXTREMELY busy) to pay attention to your account and look for problems brewing and critical updates that need to happen, upgrades and budgeting you need. Good account management includes creating and managing an I.T. budget, a custom roadmap for your business and review of regulatory compliance and security on a routine basis to make sure nothing is being overlooked.

Buyers Beware!

In order to truly compare the “cost” of one managed I.T. services contract to another, you need to make sure you fully understand what IS and ISN’T included in the SLA you are signing up for. It’s VERY easy for one I.T. services provider to appear far less expensive than another UNTIL you look closely at what you are getting. **The SLA should define the following:**

- What services the MSP is providing in clear terms.
- Guaranteed response time to a problem (both minor and major outages).
- What fees are extra (like on-site fees, after-hours support, etc.).
- Contract terms and renewals.
- Cancellation terms: specifically, how do you get out of the contract if they are not delivering the services promised?
- Liability protection, both for them and you.
- Payment terms.

The SLA should define the following:

- What services the MSP is providing in clear terms.
- Guaranteed response time to a problem (both minor and major outages).
- What fees are extra (like on-site fees, after-hours support, etc.).
- Contract terms and renewals.
- Cancellation terms: specifically, how do you get out of the contract if they are not delivering the services promised?
- Liability protection, both for them and you.
- Payment terms.

But the BEST way to avoid having a problem is **to pick the right MSP to begin with.**

The following are 21 questions to ask your I.T. services provider that will clarify exactly what you’re getting for your money. Some of these items may not be that important to you, while others (like response time, adequate insurance and cyber-security and compliance services) may be critical. Make sure you fully understand each of these items before making a decision about who the right provider is for you; then make sure you get this IN WRITING.

21 Questions You Should Ask Your I.T. Services Firm Before Signing A Contract

Customer Service

Q1 How do attorneys and staff request support?

Our Answer: When you have an I.T. issue you need help with, how do you get support? Do you have to put in a service ticket via your PC? Can you call in to a dedicated help desk or do you have to send an e-mail? If they require you to enter a ticket, what do you do when the Internet is out or your laptop or PC isn’t working? Make sure they explain exactly how they handle I.T. support requests. At our company, we welcome you to call or email to let us know you need help.

Q2 Do you have a guaranteed response time for urgent issues that interrupt billable work?

Our Answer: The #1 frustration we hear from Law Firms about their current I.T. company is “They never return our calls” or “I have to wait forever to get someone to respond to a problem.” Obviously, if you’re paying for support, that’s unacceptable. That’s why we commit to a 1 hour response time to you. By the way, internally we define success as a response within 15 minutes!

Q3 Do you provide quarterly I.T. strategy, security, backup and budget reviews for law firms?

Our Answer: Our technicians are trained to have the “heart of a teacher” and will take time to answer your questions and explain everything in simple terms. Just look in the client comments section of this report to see how our clients rave about our team of techs dedicated to supporting you.

Q4 Do you carry adequate cyber liability and errors and omissions insurance to protect our firm?

Our Answer: We conduct quarterly strategy meetings with our clients to look for areas of high risk (such as cybersecurity, compliance, unstable systems, old equipment, etc.) as well as new ways to help improve employee productivity, lower costs, increase efficiencies and align I.T. with your business goals. Most MSPs don’t offer these fractional CIO services, don’t know how to put together an I.T. budget and Roadmap, and simply offer basic help desk support and some maintenance, NOT strategy.

Q5 Do you provide written network documentation so our firm is never held hostage?

Our Answer: Another complaint we hear from new clients is over billing. Either the I.T. company forgets to invoice you for something, then hits you with a giant bill to make up for months of incorrect billing, or they invoice you so randomly with confusing bills that you don’t really know what you’re paying for. We provide detailed invoices that show who is being supported, what work was done, why and when, so you never have to guess what you are paying for. We also double-check our invoices for accuracy before they are sent to you.

Q6 Do you insist on immutable backups and periodic test restores?

Our Answer: Since your I.T. company is directly maintaining and supporting your critical data and I.T. infrastructure, it’s extremely important that they carry cyber liability and errors and omissions insurance to cover any damages (and costs) they might inadvertently cause to you. If they fail to carry insurance, it’s YOUR liability. Don’t be afraid to ask to see their coverage.

Q7 Do you understand the confidentiality obligations and practical risks law firms face?

Our Answer: If they are too small to offer dedicated account management, you’ll end up frustrated trying to find someone to help you. If it’s the owner, ask how they are going to be able to dedicate time to you while running the company (the answer: they won’t). Make sure you know what team is going to be dedicated to supporting YOU when you need help.

Cybersecurity And Compliance

Q8 Do you own problems with third-party vendors, including practice management software, document management systems, internet service, phones, printers and scanners?

Our Answer: The FTC Safeguards Rule has been around for years, but recently has been updated to be far more aggressive in its requirements for all businesses. Penalties are serious – \$100,000 per violation and over \$43,000 per day. If you fail to meet the security standards outlined (and most businesses ARE required to meet these standards) you could be fined by the FTC and sued, creating significant financial costs, tying you up in litigation and lawsuits, not to mention reputational damages.

If your current I.T. company has not talked to you about this, they are putting you at significant risk. We won’t allow a client to NOT have adequate security measures in place to meet these standards; and one of the ways cheaper MSPs charge less is because they allow their clients to operate without these critical protections. It is not the “bargain” their clients think it is. That’s why we include our ConnectSecure Essentials to provide the essential cyber security protections everyone needs.

Q9 Do they provide you with a quarterly report that shows all the updates, security patches and the status of every machine on your network so you know for SURE your systems have been secured and updated?

Our Answer: Every quarter, our clients get a detailed report that shows an overall health score for their network and the updates we've made to their network. We reassess their security, stability and compliance every quarter to ensure we are doing OUR job in watching over critical operations and data to drastically reduce the chances of a disaster or cyber-attack.

Q10 Is it standard procedure for them to provide you with written network documentation detailing what software licenses you own, user information, hardware inventory, etc., or are they the only person with the "keys to the kingdom"?

Our Answer: All clients receive this in written and electronic form at no additional cost. We also perform a quarterly update on this material and make sure certain key people from your organization have this information and know how to use it, giving you complete control over your network.

If your current I.T. company doesn't provide you with any documentation and they keep you in the dark about what "inventory" you have of equipment, software licenses, system passwords, etc., you are being "held hostage" and should NEVER allow an I.T. person to have that much control over your company. If you get the sneaking suspicion that your current I.T. person is keeping this under their control as a means of job security, get rid of them (and we can help to make sure you don't suffer ANY ill effects). This is downright unethical and dangerous to your organization, so don't tolerate it!

Q11 Do they, and their leadership team, understand regulatory compliance such as the HIPAA, PCI compliance, FTC Safeguards Rule?

Our Answer: We have expertise in managing a diverse array of compliance, including HIPAA, PCI, FTC Safeguards, ISO27001, NIST 800, CSF and CIS.

Q12 Have they asked to review your cyber liability, ransomware or crime insurance application to ensure they are doing what is required in your policy for coverage?

Our Answer: Many law firms now carry insurance to help cover the costs of a ransomware attack or other cyber fraud case where money is stolen from your organization. HOWEVER, all insurance carriers are now requiring strict cybersecurity protections be implemented BEFORE they will cover you. If your I.T. company has not talked to you about this, you might be at risk to have your claim denied for coverage due to your failure to meet the cyber standards YOU agreed to in the policy.

If a ransomware attack happens, your insurance company won't simply pay out. They will investigate the matter first to determine what happened and who caused it. If they discover you didn't have adequate preventative measures in place (as outlined on the application you completed to get coverage) they are within their right to deny coverage.

You might think your I.T. company is actually doing what is outlined on the policy, but there's a very good chance they aren't. We see this all the time when reviewing potential new clients' networks. One of the things we can do for you in a complimentary Risk Assessment is review this important area of protection and see whether or not you're meeting basic cybersecurity requirements that are in most insurance policies.

Backups And Data Recovery

Q13 Do they INSIST on immutable backups for your data?

Our Answer: The only kind of backup you should have is an "immutable" backup, which means your backup data cannot be changed or corrupted. This is important because ransomware attacks are designed to infect your backups so you are forced to pay the ransom to get your data back. This is why cyber insurance policies now require the companies they are insuring to have immutable backups in place. If you're working with an I.T. firm, they should not only know about this type of backup, but insist you have it.

Q14
Do they INSIST on doing periodic test restores of your backups to make sure the data is not corrupt and could be restored in the event of a disaster?

Our Answer: We conduct quarterly strategy meetings with our clients to look for areas of high risk (such as cybersecurity, compliance, unstable systems, old equipment, etc.) as well as new ways to help improve employee productivity, lower costs, increase efficiencies and align I.T. with your business goals. Most MSPs don't offer these fractional CIO services, don't know how to put together an I.T. budget and Roadmap, and simply offer basic help desk support and some maintenance, NOT strategy.

Q15 **Do they insist on backing up your network BEFORE performing any type of project or upgrade?**

Our Answer: We do, and that's simply as a precaution in case a hardware failure or software glitch causes a major problem.

Q16
If you were to experience a major disaster, such as an office fire or ransomware attack, do they have a written plan for how your network could be restored FAST and/or enable you to work from a remote location?

Our Answer: All our clients receive a simple disaster recovery plan for their data and network. We encourage them to do a full disaster recovery plan for their office, but at a minimum, their network will be covered should something happen.

Q18 **Do their technicians maintain current vendor certifications and participate in ongoing training – or are they learning on your dime?**

Our Answer: Our technicians are required to keep the most up-to-date vendor certifications in all the software we support. Plus, our hiring process is so stringent, 97% of the technicians who apply don't make it through. (Guess who's hiring them?)

Q19
Do their technicians conduct themselves in a professional manner?

Our Answer: Our technicians are true professionals who are not only polite, but trained in customer service, communication and high standards. They won't confuse you with "geek-speak," make you feel stupid or talk down to you. If they have to be on-site at your office, you would be proud to have them there. We believe these are minimum requirements for delivering a professional service.

Q20 **Are they familiar with (and can they support) your unique line-of-business applications?**

Our Answer: We own the problems with all line-of-business applications for our clients. That doesn't mean we can fix faulty software – but we WILL be the liaison between you and your vendor to resolve problems you are having and make sure these applications work smoothly for you.

Q21 **When something goes wrong with your Internet service, phone systems, printers or other I.T. services, do they own the problem or do they say, "That's not our problem to fix"?**

Our Answer: We feel WE should own the problem for our clients so they don't have to try to resolve any of these issues on their own – that's just plain old good service and something many computer guys won't do.

Are You Done With Frustrating I.T. Support And Never-Ending I.T. Problems?

You can also go online and schedule the call here:
www.connections.com/call

On this call we can discuss your unique situation and any concerns you have and, of course, answer any questions you have about us. If you feel comfortable moving ahead, we'll schedule a convenient time to conduct our "proprietary 14-Point I.T. Systems and Risk Assessment".

This Assessment can be conducted with or without your current I.T. company or department knowing (we can give you the full details on our initial consultation call).

At the end of the Assessment, you'll know:

- Whether or not your I.T. systems and data are truly secured from hackers and ransomware, and where you are partially or totally exposed.
- If your data is actually being backed up in a manner that would allow you to recover it quickly in the event of a data-erasing emergency or ransomware attack.
- Where you are unknowingly violating the FTC Safeguard Rule.
- How you could lower the overall costs of I.T. investments, improving communication, security and performance, as well as the productivity of your employees.

Fresh eyes see things that others cannot – so, at a minimum, our free Assessment is a completely risk-free way to get a credible third-party validation of the security, stability and efficiency of your I.T. systems. There is no cost and no obligation. We are here to earn your trust and demonstrate a far better way to get you the I.T. services and support you need.

Dedicated to serving you,
David Bennett, President | Connections for Business

See What Other Business Owners Are Saying

“Since partnering with Connections for Business, we’ve been able to work securely and effectively from anywhere with a decent internet connection...”

— not just locally. That flexibility has opened the door to hiring top talent from all over the U.S., which has been a huge game-changer for our business. Connections’ responsiveness is excellent, and they work diligently to resolve any issue that comes up. If you’re weighing your options, I’d strongly recommend Connections for Business for their cloud expertise, reliability, and the real operational freedom they’ve given us.

Mitch Fogel
Managing Partner | Fogel Law Group

“Since working with Connections, we have true peace of mind...”

Knowing they’re monitoring everything behind the scenes lets us stay focused on delivering the best possible service to our own clients. Their communication is second to none — we never feel like we’re in the dark or can’t reach someone. Availability is everything, and Connections is always there when we need them. If you’re considering who to trust with your IT, it’s a no-brainer. They’re a one-stop shop for everything tech-related.

Richard Lottier III
Client Service Specialist | Northstar Financial Planners, Inc.

“Connections is our go-to source for everything IT, fast, knowledgeable and genuinely friendly...”

What sets them apart is the personalized service. They treat us like a name, not a number, and they’re always available when we need help.

Michael Vernof
Director of Operations | B'nai Torah Congregation

See What Other Business Owners Are Saying

“Having Connections manage our IT has been a game changer...”

I know I can count on them to respond quickly, find solutions, and help however they can. Their team is not only professional and highly knowledgeable — they're also the nicest group to work with. If you're on the fence, you're truly missing out on an incredible addition to your organization.”

Natalia Sanita

Operations | The Mullings Group

“Since partnering with Connections, our systems have become far more reliable, secure and efficient...”

We've had minimal downtime, quick resolutions, and — most importantly — peace of mind. Their responsiveness and expertise are unmatched, and they're always proactive in keeping things running smoothly. Everyone we've worked with is professional, respectful, and clearly takes pride in their work.

Leesa Parker

Executive Director | B'nai Torah Congregation

“Before Connections for Business took over our IT, we were constantly reacting: downtime, cybersecurity threats and slow support...”

It was stressful and distracting. Now, everything just works. Their proactive monitoring and lightning-fast response have given us peace of mind and the freedom to focus on growing our business. It's not just tech support—it's a real strategic partnership.

Mallory C. Mangrum

Vice President | MGA Wealth
